———, Some aspects of nuclear magnetic resonance (NMR) *in vivo* imaging, 254

SUBJECT INDEX

Adrenergic stimulation, *in vivo* phosphorus-31 nuclear magnetic resonance (NMR) spectroscopy of cardiac metabolism: initial observations of hypoxia and, 350
Angiographic tool, digital subtraction angiography (DSA) "road map": an, 294
Angiography, comparison between film subtraction and digital video subtraction for, 72
Angiography, film screen intravenous subtraction, 67
Angiography, patient radiation exposures in digital intravenous, 112
Angiography with the production of high quality hard copy on film, clinical results of a digital tracing technique for, 49
Angiography (DSA) "road map": an angiographic tool, digital subtraction, 294
Aperture assessment, 211
Application of cross correlation technique in left ventricular wall motion assessment, 115
Approaches to nuclear magnetic resonance (NMR) imaging of blood flow, 336
Archiving systems, performance of proposed digital picture, 314
Array digital radiography system, fiber optically coupled diode, 286
Arteriography: now and the future, digital subtraction, 2
Artifacts encountered when scanning infant heads with x-ray computed tomography (CT), density resolution, 184
Attenuator, digitally controlled beam, 106

Beam attenuator, digitally controlled, 106
Blood flow, approaches to nuclear magnetic resonance (NMR) imaging of, 336
Brain: initial clinical experience, nuclear magnetic resonance (NMR) imaging of the, 374

Breast image total system modulation transfer function (MTF) on diagnostic accuracy, method to sutdy the effect of controlled changes of, 84
Bureau of Radiological Health in assessment of risks from clinical nuclear magnetic resonance procedures, role of the, 334

Calibration of a digital radiography system for quantitative studies, 122
Cardiac metabolism: initial observations of hypoxia and adrenergic stimulation, *in vivo* phosphorus-31 nuclear magnetic resonance (NMR) spectroscopy of, 350
Characterization and measurement of noise properties for a digital radiography system, 24
Characterization, scatter field influence on x-ray grid, 198
Chest and other structures; *in vivo* clinical trials, nuclear magnetic resonance imaging and evaluation of, 382
Clinical decision analysis in predicting the efficacy of newer radiological imaging modalities: radioscintigraphy versus single photon transverse section emission computed tomography, use of, 190
Clinical experience, nuclear magnetic resonance (NMR) imaging of the brain: initial, 374
Clinical nuclear magnetic resonance procedures, role of the Bureau of Radiological Health in assessment of risks from, 334
Clinical results of a digital tracing technique for angiography with the production of high quality hard copy on film, 49
Clinical trials, nuclear magnetic resonance imaging and evaluation of chest and other structures; *in vivo,* 382
Comparison between film subtraction and digital video subtraction for angiography, 72
Comparison of modulation transfer function (MTF) and contrast detail image evaluation tests, 90
Computed tomographic (CT) reconstruction from limited projection angles, 166
Computed tomographic (CT) scan images for tissue densitometry, computer analysis of, 174
Computed tomographic (CT) scanner, off-line automated performance test of the Somatom-2, 155
Computed tomography (CT), density resolution artifacts encountered when scanning infant heads with x-ray, 184
Computed tomography , determination of the square wave response function (SWR) in, 160
Computed tomography, practical approach to quality assurance in, 148
Computed tomography, use of clinical decision analysis in predicting the efficacy of newer radiological imaging modalities: radioscintigraphy versus single photon transverse section emission, 190
Computer analysis of computed tomographic (CT) scan images for tissue densitometry, 174
Computer system for film repeat analysis, 271
Computerized interactive diagnostic intelligence center, 275
Contrast detail image evaluation tests, comparison of modulation transfer function (MTF) and, 90
Contrast ratio of intensified fluoroscopic imaging systems, evaluation of the, 229
Contrast: results, 1981, in the field measurement of image intensifier tube, 218
Correlation technique in left ventricular wall motion assessment, application of cross, 115
Cross correlation technique in left ventricular wall motion assessment, application of, 115

Darkroom exposure on radiographs, photographic effect of, 94
Densitometry, computer analysis of computed tomographic (CT) scan images for tissue, 174
Density resolution artifacts encountered when scanning infant heads with x-ray computed tomography (CT), 184
Determination of the square wave response function (SWR) in computed tomography, 160
Development of a new digital radiographic image processing system, 42
Diagnostic accuracy, method to study the effect of controlled changes of breast image total system modulation transfer function (MTF) on, 84
Diagnostic imaging examinations, information content of digital, 307
Diagnostic imaging, integrated systems for digital, 260
Diagnostic intelligence center, computerized interactive, 275
Diagnostic radiology, high speed fiber optic link for, 319
Digital angiography of the heart: comparison with catheter angiography and nuclear medicine in 100 patients (Oral only), 385
Digital diagnostic imaging examinations, information content of, 307
Digital diagnostic imaging, integrated systems for, 260
Digital fluorographic imaging device, image quality evaluation of, 141
Digital fluorography, hybrid subtraction in, 34
Digital fluorography, quantitative, 14
Digital imaging process of minimal radiographs, logical consideration of, 324
Digital intravenous angiography, patient radiation exposures in, 112
Digital picture archiving systems, performance of proposed, 314
Digital processing of minimal radiographs for exposure reductions, 296
Digital radiographic image processing system, development of a new, 42
Digital radiography system, characterization and measurement of noise properties for a, 24
Digital radiography system, fiber optically coupled diode array, 286
Digital radiography system, performance test and quality control of a, 130
Digital radiography system for quantitative studies, calibration of a, 122
Digital radiography: a technology overview, 7
Digital subtraction angiography of bypass grafts (Oral only), 385
Digital subtraction angiography in the evaluation of trauma (Oral only), 385
Digital subtraction angiography for preoperative evaluation of tumors of the extremities (Oral only), 385
Digital subtraction angiography (DSA) "road map": an angiographic tool, 294
Digital subtraction arteriography: now and the future, 2
Digital subtraction imaging using an isocon camera (Oral only), 385
Digital tracing technique for angiography with the production of high quality hard copy on film, clinical results of a, 49
Digital video radiography: applications in gastrointestinal (GI) and intravenous pyelogram (IVP) examinations, 278
Digital video subtraction for angiography, comparison between film subtraction and, 72
Digitally controlled beam attenuator, 106
Diode array digital radiography system, fiber optically coupled, 286
Dose and image quality in mammography, simultaneous objective measurements of, 238

Emission computed tomography, use of clinical decision analysis in predicting the efficacy of newer radiological imaging modalities: radioscintigraphy versus single photon transverse section, 190
Evaluation of the contrast ratio of intensified fluoroscopic imaging systems, 229
Examinations, information content of digital diagnostic imaging, 307
Exposure on radiographs, photographic effect of darkroom, 94
Exposure reductions, digital processing of minimal radiographs for, 296

Fiber optic link for diagnostic radiology, high speed, 319
Fiber optically coupled diode array digital radiography system, 286
Film, clinical results of a digital tracing technique for angiography with the production of high quality hard copy on, 49
Film and processing on film-screen image noise, influence of, 54
Film repeat analysis, computer system for, 271
Film-screen image noise, influence of film and processing on, 54
Film screen intravenous subtraction angiography, 67
Film subtraction and digital video subtraction for angiography, comparison between, 72
Films, prediction of the effect of residual thiosulfate content on the image stability of radiographic, 246

Flow analysis with digital subtraction angiography, part I: accuracy of time-concentration curves of iodine (Oral only), 385
Fluorographic imaging device, image quality evaluation of digital, 141
Fluorography, hybrid subtraction in digital, 34
Fluorography, quantitative digital, 14
Fluoroscopic imaging systems, evaluation of the contrast ratio of intensified, 229
Fourier nuclear magnetic resonance (NMR) imaging methods, generalized, 354
Fundamental limits to the sensitivity of nuclear magnetic resonance (NMR) scanners, 342

Gastrointestinal (GI) and intravenous pyelogram (IVP) examinations, digital video radiography: applications in, 278
Generalized Fourier nuclear magnetic resonance (NMR) imaging methods, 354
Grid characterization, scatter field influence on x-ray, 198

Hard copy on film, clinical results of a digital tracing technique for angiography with the production of high quality, 49
Heads with x-ray computed tomography (CT), density resolution artifacts encountered when scanning infant, 184
High speed fiber optic link for diagnostic radiology, 319
Hybrid subtraction in digital fluorography, 34
Hypoxia and adrenergic stimulation, *in vivo* phosphorus-31 nuclear magnetic resonance (NMR) spectroscopy of cardiac metabolism: initial observations of, 350

Image evaluation tests, comparison of modulation transfer function (MTF) and contrast detail, 90
Image intensifier tube contrast: result, 1981, in the field measurement of, 218
Image noise, influence of film and processing on film-screen, 54
Image processing system, development of a new digital radiographic, 42
Image quality evaluation of digital fluorographic imaging device, 141
Image quality in mammography, simultaneous objective measurements of dose and, 238
Image stability of radiographic films, prediction of the effect of residual thiosulfate content on the, 246
Image total system modulation transfer function (MTF) on diagnostic accuracy, method to study the effect of controlled changes of breast, 84
Images, quantitation of zonal parametric, 302
Images in screen film systems, quantum noise-limited, 62
Images for tissue densitometry, computer analysis of computed tomographic (CT) scan, 174
Imaging of blood flow, approaches to nuclear magnetic resonance (NMR), 336
Imaging of the brain: initial clinical experience, nuclear magnetic resonance (NMR), 374
Imaging device, image quality evaluation of digital fluorographic, 141
Imaging and evaluation of chest and other structures; *in vivo* clinical trials, nuclear magnetic resonance, 382
Imaging examinations, information content of digital diagnostic, 307
Imaging, integrated systems for digital diagnostic, 260
Imaging methods, generalized Fourier nuclear magnetic resonance (NMR), 354
Imaging modalities: radioscintigraphy versus single photon transverse section emission computed tomography, use of clinical decision analysis in predicting the efficacy of newer radiological, 190
Imaging, nuclear magnetic resonance and its impact on medical, 330
Imaging with nuclear magnetic resonance in a 0.12 T resistive magnet, 365
Imaging process of minimal radiographs, logical consideration of digital, 324
Imaging, some aspects of nuclear magnetic resonance (NMR) *in vivo*, 254
Imaging systems, evaluation of the contrast ratio of intensified fluoroscopic, 229
In the field measurement of image intensifier tube contrast: results, 1981
In vivo clinical trials, nuclear magnetic resonance imaging and evaluation of chest and other structures;, 382
In vivo imaging, some aspects of nuclear magnetic resonance (NMR), 254
In vivo nuclear magnetic resonance imaging (Oral only), 385
In vivo nuclear magnetic resonance imaging of tumors in rats (Oral only), 385
In vivo phosporus-31 nuclear magnetic resonance (NMR) spectroscopy of cardiac metabolism: initial observations of hypoxia and adrenergic stimulation, 350
Infant heads with x-ray computed tomography (CT), density resolution artifacts encountered when scanning, 184
Influence of film and processing on film-screen image noise, 54
Information content of digital diagnostic imaging examinations, 307
Integrated systems for digital diagnostic imaging, 260
Intelligence center, computerized interactive diagnostic, 275
Intensified fluoroscopic imaging systems, evaluation of the contrast ratio of, 229
Intensifier tube contrast: results, 1981, in the field measurement of image, 218
Interactive diagnostic intelligence center, computerized, 275
Intravenous angiography, patient radiation exposures in digital, 112
Intravenous pyelogram (IVP) examinations, digital video radiography: applications in gastrointestinal (GI) and, 278
Intravenous subtraction angiography, film screen, 67

Linear orientation tomographic system, 214
Link for diagnostic radiology, high speed fiber optic, 319
Logical consideration of digital imaging process of minimal radiographs, 324

Magnet, imaging with nuclear magnetic resonance in a 0.12 T resistive, 365
Magnetic resonance (NMR) imaging of blood flow, approaches to nuclear, 336
Magnetic resonance (NMR) imaging of the brain: initial clinical experience, nuclear, 374
Magnetic resonance imaging and evaluation of chest and other structures; *in vivo* clinical trials, nuclear, 382
Magnetic resonance (NMR) imaging methods, generalized Fourier nuclear, 354
Magnetic resonance and its impact on medical imaging, nuclear, 330
Magnetic resonance (NMR) *in vivo* imaging, some aspects of nuclear, 254
Magnetic resonance procedures, role of the Bureau of Radiological Health in assessment of risks from clinical nuclear, 334
Magnetic resonance (NMR) scanners, fundamental limits to the sensitivity of nuclear, 342
Magnetic resonance (NMR) spectroscopy of cardiac metabolism: initial observations of hypoxia and adrenergic stimulation, *in vivo* phosphorus-31 nuclear, 350
Magnetic resonance in a 0.12 T resistive magnet, imaging with nuclear, 365
Mammography, multiparameter optimization of, 75
Mammography, simultaneous objective measurements of dose and image quality in, 238
Measurement of noise properties for a digital radiography system, characterization and, 24
Measurements of dose and image quality in mammography, simultaneous objective, 238
Medical imaging, nuclear magnetic resonance and its impact on, 330
Metabolism: initial observations of hypoxia and adrenergic stimulation, *in vivo* phosphorus-31 nuclear magnetic resonance (NMR) spectroscopy of cardiac, 350
Method to analyze left ventricular wall motion appropriate for nuclear, echo, and angiographic studies (Oral only), 385

Method to study the effect of controlled changes of breast image total system modulation transfer function (MTF) on diagnostic accuracy, 84
Minimal radiographs for exposure reductions, digital processing of, 296
Minimal radiographs, logical consideration of digital imaging process of, 324
Modalities: radioscintigraphy versus single photon transverse section emission computed tomography, use of clinical decision analysis in predicting the efficacy of newer radiological imaging, 190
Modulation transfer function (MTF) and contrast detail image evaluation tests, comparison of, 90
Motion assessment, application of cross correlation technique in left ventricular wall, 115
Modulation transfer function (MTF) on diagnostic accuracy, method to study the effect of controlled changes of breast image total system, 84
Multiparameter optimization of mammography, 75

Noise, influence of film and processing of film-screen image, 54
Noise-limited images in screen film systems, quantum, 62
Noise properties for a digital radiography system, characterization and measurement of, 24
Nuclear magnetic resonance: clinical evaluation (Oral only), 385
Nuclear magnetic resonance (NMR) imaging of blood flow, approaches to, 336
Nuclear magnetic resonance (NMR) imaging of the brain: initial clinical experience, 374
Nuclear magnetic resonance imaging and evaluation of chest and other structures; *in vivo* clinical trials, 382
Nuclear magnetic resonance (NMR) imaging methods, generalized Fourier, 354
Nuclear magnetic resonance imaging with pathologic and computer tomographic correlation (Oral only), 385
Nuclear magnetic resonance and its impact on medical imaging, 330
Nuclear magnetic resonance (NMR) *in vivo* imaging, some aspects of, 254
Nuclear magnetic resonance procedures, role of the Bureau of Radiological Health in assessment of risks from clinical, 334
Nuclear magnetic resonance (NMR) scanners, fundamental limits to the sensitivity of, 342
Nuclear magnetic resonance (NMR) spectroscopy of cardiac metabolism: initial observations of hypoxia and adrenergic stimulation, *in vivo* phosphorus-31, 350
Nuclear magnetic resonance in a 0.12 T resistive magnet, imaging with, 365

Off-line automated performance test of the Somatom-2 computed tomographic (CT) scanner, 155
Optimization of mammography, multiparameter, 75

Parametric images, quantitation of zonal, 302
Patient radiation exposures in digital intravenous angiography, 112
Performance of proposed digital picture archiving systems, 314
Performance test and quality control of a digital radiography system, 130
Performance test of the Somatom-2 computed tomographic (CT) scanner, off-line automated, 155
Phosphorus-31 nuclear magnetic resonance (NMR) spectroscopy of cardiac metabolism: initial observations of hypoxia and adrenergic stimulation, *in vivo*, 350
Photographic effect of darkroom exposure on radiographs, 94
Photon transverse section emission computed tomography, use of clinical decision analysis of predicting the efficacy of newer radiological imaging modalities: radioscintigraphy versus single, 190
Picture archiving systems, performance of proposed digital, 314
Practical approach to quality assurance in computed tomography, 148
Prediction of the effect of residual thiosulfate content on the image stability of radiographic films, 246
Processing on film-screen image noise, influence of film and, 54
Processing of minimal radiographs for exposure reductions, digital, 296
Processing system, development of a new digital radiographic image, 42
Projection angles, computed tomographic (CT) reconstruction from limited, 166
Pyelogram (IVP) examinations, digital video radiography: applications in gastrointestinal (GI) and intravenous, 278

Quality assurance in computed tomography, practical approach to, 148
Quality control of a digital radiography system, performance test and, 130
Quantitation of zonal parametric images, 302
Quantitative digital fluorography, 14
Quantitative studies, calibration of a digital radiography system for, 122
Quantum noise-limited images in screen film systems, 62

Radiation exposures in digital intravenous angiography, patient, 112
Radiographic films, prediciton of the effect of residual thiosulfate content on the image stability of, 246
Radiographic image processing system, development of a new digital, 42
Radiographs for exposure reductions, digital processing of minimal, 296
Radiographs, logical consideration of digital imaging process of minimal, 324
Radiographs, photographic effect of darkroom exposure on, 94
Radiography: applications in gastrointestinal (GI) and intravenous pyelogram (IVP) examinations, digital video, 278
Radiography system, characterization and measurement of noise properties for a digital, 24
Radiography system, fiber optically coupled diode array digital, 286
Radiography system, performance test and quality control of a digital, 130
Radiography system for quantitative studies, calibration of a digital, 122
Radiography: a technology overview, digital, 7
Radiological Health in assessment of risks from clinical nuclear magnetic resonance procedures, role of the Bureau of, 334
Radiological imaging modalities: radioscintigraphy versus single photon transverse section emission computed tomography, use of clinical decision analysis in predicting the efficacy of newer, 190
Radiology, high speed fiber optic link for diagnostic, 319
Radioscintigraphy versus single photon transverse section emission computed tomography, use of clinical decision analysis in predicting the efficacy of newer radiological imaging modalities:, 190
Real time digital radiography with fault-tolerant hardware (Oral only), 385
Reconstruction from limited projection angles, computed tomographic (CT), 166
Relative flow measurements with intravenous digital subtraction angiography (Oral only), 385
Resistive magnet, imaging with nuclear magnetic resonance in a 0.12 T, 365
Resolution artifacts encountered when scanning infant heads with x-ray computed tomography (CT), density, 184
Resonance (NMR) imaging of blood flow, approaches to nuclear magnetic, 336
Resonance (NMR) imaging of the brain: initial clinical experience, nuclear magnetic, 374
Resonance imaging and evaluation of chest and other structures; *in vivo* clinical trials, nuclear magnetic, 382
Resonance (NMR) imaging methods, generalized Fourier nuclear magnetic, 354
Resonance and its impact on medical imaging, nuclear magnetic, 330
Resonance (NMR) *in vivo* imaging, some aspects of nuclear magnetic, 254

Resonance procedures, role of the Bureau of Radiological Health in assessment of risks from clinical nuclear magnetic, 334
Resonance (NMR) scanners, fundamental limits to the sensitivity of nuclear magnetic, 342
Resonance (NMR) spectroscopy of cardiac metabolism: initial observations of hypoxia and adrenergic stimulation, *in vivo* phosphorus-31 nuclear magnetic, 350
Resonance in a 0.12 T resistive magnet, imaging with nuclear magnetic, 365
Response function (SWR) in computed tomography, determination of the square wave, 160
"Road Map": an angiographic tool, digital subtraction angiography (DSA), 294
Role of the Bureau of Radiological Health in assessment of risks from clinical nuclear magnetic resonance procedures, 334

Scan images for tissue densitometry, computer analysis of computed tomographic (CT), 174
Scanner, off-line automated performance test of the Somatom-2 computed tomographic (CT), 155
Scanners, fundamental limits to the sensitivity of nuclear magnetic resonance (NMR), 342
Scanning infant heads with x-ray computed tomography (CT), density resolution artifacts encountered when, 184
Scatter field influence on x-ray grid characterization, 198
Screen film systems, quantum noise-limited images in, 62
Screen intravenous subtraction angiography, film 67
Sensitivity of nuclear magnetic resonance (NMR) scanners, fundamental limits to the, 342
Service contracts for x-ray equipment, 223
Simultaneous objective measurements of dose and image quality in mammography, 238
Somatom-2 computed tomographic (CT) scanner, off-line automated performance test of the, 155
Some aspects of nuclear magnetic resonance (NMR) *in vivo* imaging, 254
Spectroscopy of cardiac metabolism: initial observations of hypoxia and adrenergic stimulation, *in vivo* phosphorus-31 nuclear magnetic resonance (NMR), 350
Square wave response function (SWR) in computed tomography, determination of the, 160
Stability of radiographic films, prediction of the effect of residual thiosulfate content on the image, 246
Subtraction for angiography, comparison between film subtraction and digital video, 72
Subtraction angiography, film screen intravenous, 67
Subtraction angiography (DSA) "road map": an angiographic tool, digital, 294
Subtraction arteriography: now and the future, digital, 2
Subtraction and digital video subtraction for angiography, comparison between film, 72

Three-dimensional computer graphic presentation of the coronary arterial tree (Cancelled), 385
Thiosulfate content on the image stability of radiographic films, prediction of the effect of residual, 246
Tissue densitometry, computer analysis of computed tomographic (CT) scan images for, 174
Tomographic (CT) reconstruction from limited projection angles, computed, 166
Tomographic (CT) scan images for tissue densitometry, computer analysis of computed, 174
Tomographic (CT) scanner, off-line automated performance test of the Somatom-2 computed, 155
Tomographic system, linear orientation, 214
Tomography, determination of the square wave response function (SWR) in computed, 160
Tomography, practical approach to quality assurance in computed, 148
Tomography, use of clinical decision analysis in predicting the efficacy of newer radiological imaging modalities: radioscintigraphy versus single photon transverse section emission computed, 190
Tracing technique for angiography with the production of high quality hard copy on film, clinical results of a digital, 49
Transfer function (MTF) and contast detail image evaluation tests, comparison of modulation, 90
Transverse section emission computed tomography, use of clinical decision analysis in predicting the efficacy of newer radiological imaging modalities: radioscintigraphy versus single photon, 190

Use of clinical decision analysis in predicting the efficacy of newer radiological imaging modalities: radioscintigraphy versus single photon transverse section emission computed tomography, 190

Ventricular wall motion assessment, application of cross correlation technique in left, 115
Video photography in medical imaging (Oral only), 385
Video radiography: applications in gastrointestinal (GI) and intravenous pyelogram (IVP) examinations, digital, 278
Video subtraction for angiography, comparison between film subtraction and digital, 72

Wave response function (SWR) in computed tomography, determination of the square, 160

X-ray computed tomography (CT), density resolution artifacts encountered when scanning infant heads with, 184
X-ray equipment, service contracts for, 223
X-ray grid characterization, scatter field influence on, 198

Zonal parametric images, quantitation of, 302
